

BIKE DETECTION LOOPS AT UCI

UCI Transportation has installed bicycle detection loops to improve riding on campus roadways. These loops are located within the pavement and allow your bike to trigger a green light at the intersection. To activate, place your “tires on the wires”, or in the center of the bike stencil, and prepare for the signal to change.

SAFETY AND BENEFITS OF USE

- **Improve your efficiency** with bike loops, which enhance safety and
- **Stay in your lane** as there is no need to press a crossing button or use the crosswalk
- **Make left turns safely** by using the left turn lane with other vehicles
